Zadig

USB driver installation made easy

Zadig is a Windows application that installs generic USB drivers, such as [WinUSB](#), [libusb-win32/libusb0.sys](#) or [libusbK](#), to help you access USB devices.

It can be especially useful for cases where:

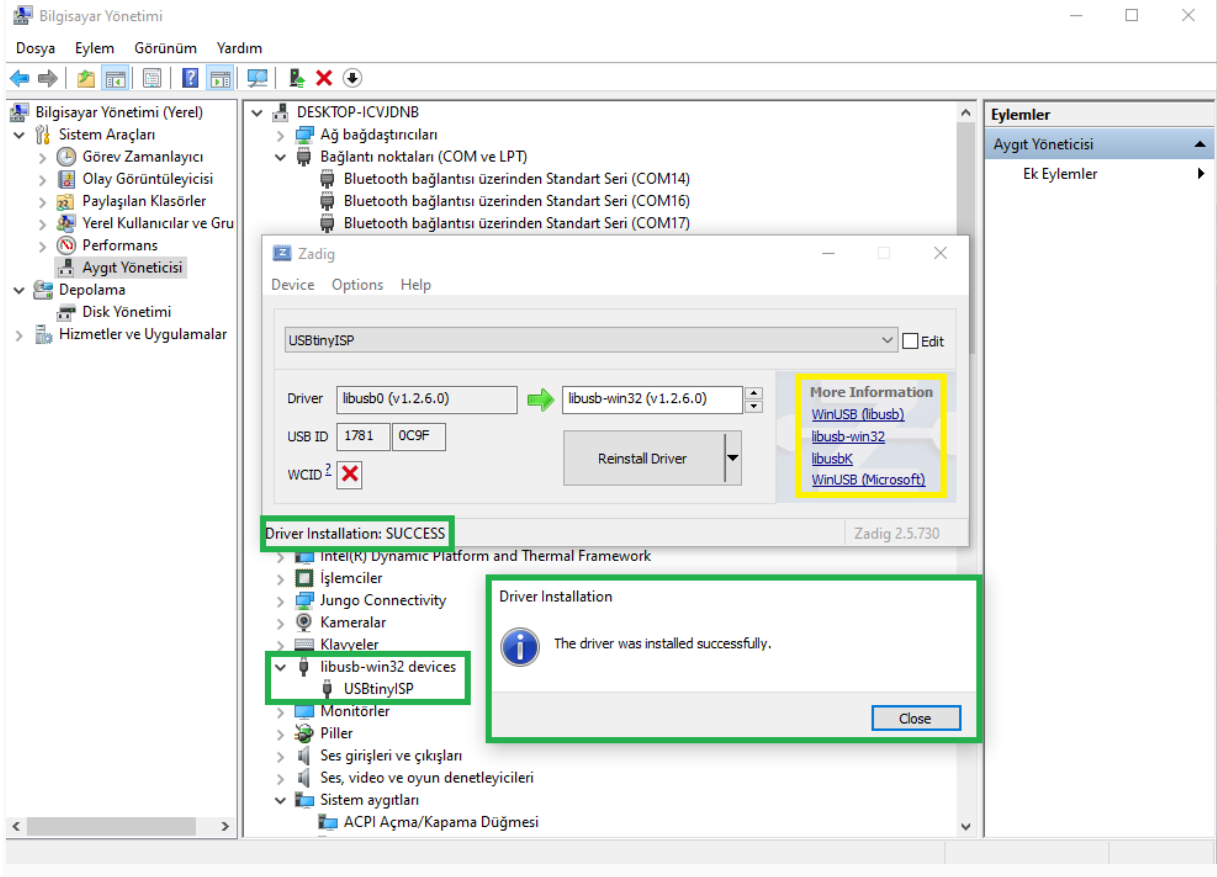

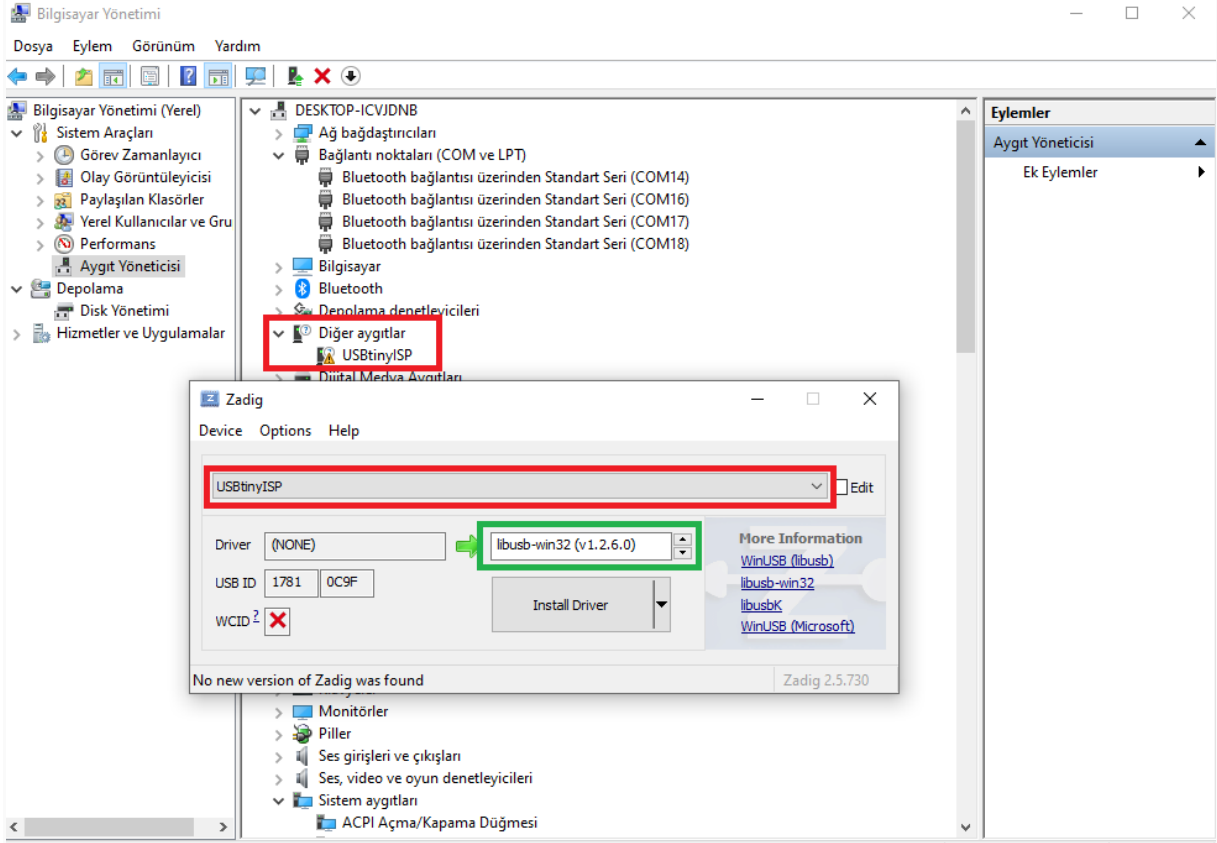

- you want to access a device using a libusb-based application
- you want to upgrade a generic USB driver
- you want to access a device using WinUSB

Note: "libusb-based" above means an application that uses either [libusb](#), [libusb-win32](#) or [libusbK](#).

Download

Updated 2020.03.28:

- [Zadig 2.5](#) (4.9 MB)
- [Other versions](#)

```
Blink
Blink

Turns an LED on
and then turns it
off.

Most Arduinos have
an LED attached to
the board. If you
are using a board
with an LED, it is
attached to the
correct LED pin.
If you want to
know more about
the correct LED
pin for your
model, check the
Arduino website
at
https://www.arduino.cc/en/Tutorial/Blink

*/

// the setup function runs once when you press reset or power the board
void setup() {
  // initialize digital pin LED_BUILTIN as an output.
  pinMode(LED_BUILTIN, OUTPUT);
}

// the loop function runs over and over again forever
void loop() {
  digitalWrite(LED_BUILTIN, HIGH); // turn the LED on (HIGH is the positive voltage)
  delay(500); // wait for a second
  digitalWrite(LED_BUILTIN, LOW); // turn the LED off by making the voltage LOW
  delay(500); // wait for a second
}
```
